Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention relates to the isolation of a human kinase and the polynucleotide sequences encoding it. The human kinase of the invention is related to the serine/threonine kinase substanily. The gene encoding the human kinase is located on chromosome 5. The polypeptide and disease or condition mediated by a human kinase. Both the polypeptide and disease or condition mediated by a human kinase. Both the polypeptide and disease or condition mediated by a human kinase. Both the polypeptide and disease or condition mediated by a human kinase. Both the polypeptide and oblymucleotide sequences are useful as models for the development of human therapeutic agents, and as query sequences to perform a search against sequence are perform a search against sequence data bases to identify other family members of related sequences. The polypeptide is useful to raise antibodies or to elicit another immune response as a reagent in assays members of related sequences. The polypeptide is useful to raise designed to quantitatively determine levels of the protein in biological fluids, as markers for tissues in which the corresponding protein is preferentially expressed, in drug screening assays, in call-based or call preferentially expressed, in drug screening assays, in call-based or call free systems, to identify compounds that modulate kinase activity of the ability to stimulate or inhibit interaction between the kinase protein, and anotecule that normally interactes with the kinase protein, and in pharmacogenomic analysis. The polymucleotide is useful for a cativity of the human kinase gene in climical trials or in a treatment regimen, in diagnostic assays for qualitative changes in a human kinase gene expression in cells, tissues and adsease, nevertheless affects the treatment modality, as antissues and enganes in a human kinase gene expression in cells, tissues and organisms, for gene therapy whence the serine/threening produce transgence and personner control human kinase related to the serine/threening protein kinas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated human kinase peptide useful for treating disorder characterized by absence of, in appropriate or unwanted expression of the kinase protein, and as immunogens to raise antibodies.

The human kinase peptide and nucleic acid molecules are useful in the development of human therapeutics and diagnostic compositions. The peptides are useful for treating disorders (e.g. cancers, inflammations, arteriosclerosis or psoriasis) characterised by an absence of, inappropriate, or unwanted expression of the kinase protein. These molecules are particularly useful as models for developing human therapeutic targets, identifying therapeutic proteins, or serving as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The peptides are also useful for raising antibodies or eliciting an immune response; as a reagent (including the labelled reagent) in assays

designed to quantitatively determine levels of the protein (or its binding partner or ligand) in biological fluids; or as markers for tissues in which the corresponding protein is preferentially expressed. The agents identified are useful for treating a subject with a disorder mediated by kinase pathway. The present sequence represents the amino acid sequence of a human kinase
                                                                                                                                                                                                                                    1 MGANTSRKEPVFDENEDVNFDHFEILRAIGKGSFGEVCIVQKNDTKKMCAMKYMNKQKCV

The invention provides human protein kinases and protein kinase-like enzymes and polymucleotides are useful for treating a disease or colypeptides and their modulators are useful for treating a disease or disorder such as cancers of hematopoietic cardiovascular disease, brain or neuronal-associated disease and metabolic disorders, including cancers of thematopoietic origin, diseases of the cancers of hematopoietic origin, diseases of the cancers of hematopoietic origin, diseases of the cancers of hematopoietic origin, diseases of the cancers and set of hematopoietic origin, diseases of the partipheral nervous system.

Cancers and set of set of hematopoietic origin, diseases of the cancers of the partipheral nervous system.

Alzheimer's disease, Parkinson's disease, migraines pain, sexual dysfunction, acteria and fungi, ocular diseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypotension, cancers and organ transplant rejection. They are also useful for treating rhintis, autoimmunity, atherosolerosis, psoriasis, osteoarthritis, asthma, chronic inflammatory pelvic disease, chronic inflammatory bowel disease, rheumatory pelvic diseases uch as diabetes, obesity, cardiovascular diseases such as diabetes, cornary thrombosis, clotting disorders and atherosolerosis, cullur, cornary thrombosis, clotting disorders and atherosolerosis, cullur diseases such as glaucoma, retinopathy and macular degeneration, psychiatric and neurological disorders such as anxiety, schlzophrenia, cemental, manic depression, etc. The polymucleotides are useful in gene therapy techniques to treat the above mentioned disorders.                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel human protein (MHP) kinases and their corresponding cDNA molecules. MHP kinase and its DNA are useful as reagents in assays for screening compounds that can be used as the reagents useful in the therapeutic treatment of mental, biological and medical disorders, and also as chemotherapeutic agents useful in the treatment of breast cancer and prostate cancer. MHP DNA is useful in the treatment of breast cancer and prostate cancer. MHP DNA is useful for diagnosis, drug screening, clinical trial monitoring, the treatment of physiological disorders or disease, and cosmetic and nutriceutical applications. MHP DNA is also useful for the identification of coding sequence and the mapping of a unique gene to a particular of coding sequence and the mapping of a unique gene to a particular screening libraries and assessing gene expression patterns, and also for the detection of mutant NHPB or inappropriately expressed NHPB for disease diagnosis. NHP DNA is also useful in gene therapy. The present sequence is novel human protein (NHP) kinase which is similar to serine/threonine protein kinases, ribosomal protein kinases and cAMP-capped and capped and c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The present invention relates to human kinases (PKIN) and polymucleotides encoding such proteins. PKIN sequences of the invention are useful for diagnosing, treating or preventing disorders associated with aberrant expression of PKIN, particularly immune system disorders (e.g. acquired immune deficiency syndrome (AIDS), thymic hypoplasia, Crohn's disease, anaemia, asthma), neurological disorders (e.g. epilepsy, Charcot-Marieroth disease or seizures), cell proliferative disorders (e.g. cancers such as adenocarcinoma, leukaemia, lymphoma, melanoma, meloma, sarcoma), and developmental disorders (e.g. Down's syndrome). They are also used in gene therapy and protein therapy. The present sequence is human PKIN-20
                                                New human kinases, useful for diagnosing, treating or preventing immune system disorders (e.g. Crohn's disease), neurological disorders (e.g. epilepsy), or cell proliferative disorders (e.g. cancers such as leukemia or lymphoma).
                                                                                                                                                                                Claim 75; Page 184-185; 218pp; English.

```

transduction of signals for cell proliferation, differentiation and transduction of signals for cell proliferation, differentiation and apaptosis, modulating the activity of one or more proteins involved in cellular growth or differentiation. 1991 molecules are overspressed in some tumour cells, where they may inappropriately propagate either cell proliferation or cell survival signals. The invention provides methods for the diagnosis and treatment of cancer, including breast colon, brain and especially lung cancer (claimed), and methods for evaluating the efficacy of treatment. 14911 polypeptides can be produced by cultivation of claimed host cells, and used in claimed methods of identifying 14911 modulator compounds. 14911 binding partners are used in claimed methods of identifying subjects at risk of cancer or cellular proliferation and/or differentiation disorders. A claimed method of treating cancer or

present sequence is that of a novel human protein kinase, designated

Claim 4(d); Fig 1A-B; 115pp; English.

modulators.

corresponding cDNA molecules. NHP kinase and its DNA are useful as reagents in assays for screening compounds that can be used as bharmaceutical reagents useful in the therapeutic treatment of mental biological and medical disorders, and also as chemotherapeutic agents useful in the treatment of breast cancer and prostate cancer. NHP DNA is useful for diagnosis, drug screening, clinical trial monitoring, the treatment of physiological disorders or diseases, and cosmetic and nutriceutical applications. NHP DNA is also useful for the identification of coding sequence and the mapping of a unique gene to a particular chromosome. NHP DNA is further useful as hybridisation probes for screening libraries and assessing gene expression patterns, and also for the detection of mutant NHPB or inappropriately expressed NHPB for sequence is novel human protein (NHP) kinase which is similar to and an analyses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAU03501-AAU03557 represent novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polymucleotides encoding protein kinases and the polymorpides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of hemanopoietic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. theumatoid arthritis), neurological disorders (e.g. achizophrenia), neurodespenerative disorders (e.g. chanson's disease), inflammatory disorders (e.g. asthma), infectious disorders (e.g. HIV) and reproductive disorders (e.g. infectility).

Additionally, polymucleotides encoding protein kinases may be used as antigens in the production of antibodies against the protein kinase such in assays to identify modulators of protein kinase expression and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           181 AGTKPYMAPEMFSSRKGAGYSFAVDWWSLGVTAYBLLRGRRPYHIRSSTSSKEIVHTFET 240

C. The invention relates to a new isolated human kinase peptide. The human kinase peptide and nucleic acid molecules are useful in the development of kinase peptide and nucleic acid molecules are useful in the development of the mann therapeutics and diagnostic compositions. The peptides are useful for treating disorders (e.g. cancers, inflammations, carteriosclarosis or psoriasis) characterised by an absence of, inappropriate, or unwanted avgression of the kinase protein. These molecules are particularly useful as models for developing human therapeutic proteins, or serving as therapeutic targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The peptides are also useful for raising antibodies or eliciting an immune compones, as a reagent (including the labelled reagent) in assays response to quantitatively determine levels of the protein (or its binding partner or ligand) in biological fluids; or as markers for tissues in which the corresponding protein is preferentially expressed. The agents identified are useful for treating a subject with a disorder mediated by kinase pathway. The present sequence represents the amino corresponding protein kinase #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated human kinase proteins, useful for treating disorders mediated by kinase pathway (e.g. cancers, inflammations, arteriosclerosis or psoriasis), or for development of human therapeutics and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 - ERNEYRNYFKELQIMQSLEHPFLVNLWYSFQDEEDMFMVVDLLLGGDLRYHLQQNVHFK 119

the invention relates to a new isolated human kinase peptide. The human kinase peptide and nucleic acid molecules are useful in the development of human therapeutics and diagnostic compositions. The peptides are useful for treating disorders (e.g. cancers, inflammations, arteriosclerosis or psoriasis) characterised by an absence of, inappropriate, or unwanted expression of the kinase protein. These molecules are particularly useful as models for developing human therapeutic targets, identifying therapeutic proteins, or serving as therapeutic targets for the development of human therapeutic proteins, or serving as targets for the development of human therapeutic gents that modulate kinase activity in cells and tissues that express the kinase. The peptides are also useful for raising antibodies or eliciting an immune response, as a reagent (including the labelled reagent) in assays response, as a reagent (including the labelled reagent) in assays response to rigand) in biological fluids, or as markers for tissues in which the corresponding protein is preferentially expressed. The agents identified are useful for treating a subject with a disorder mediated by kinase pathway. The present sequence represents the amino acid sequence of the human serine/threonine protein kinase #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated human kinase proteins, useful for treating disorders and landlated by kinase pathway (e.g. cancers, inflammations, arteriosclerosis or psoriasis), or for development of human therapeutics and diagnostic compositions.
                                                                                                                                                                                                          297

The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression cuch as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune cisorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, proriasis, rhinitis, autoimmulty, diabetes, cancers and reproductive

```
The invention relates to 446 newly isolated polynucleotide sequences. The activity of polynucleotides of the invention may be described as, vulnerary, neuroprotective, immunomulator, cytostatic and antinifiammatory. Compositions comprising nucleic acids of the invention are useful for treating a mammalian subject, or as nutritional sources or supplements. These are useful in gene therapy, particularly for treating amyotrophic lateral sclerosis, autoimmune disorders, cancer or inflammation. The nucleic acids and polypeptides are also useful in diagnostic and research methods. The sequences given in records ABP4359 represent polypeptides encoded by polynucleotides of the invention. NoTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/bublished_pct_sequences
                                                                                                                                                                                                                                                                                                                                  New polypeptides and their encoded proteins, useful as nutritional sources or supplements, or in gene therapy, particularly for treating wounds, Alzheimer's disease, amyotrophic lateral sclerosis, cancer or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ETTVVTYPSAWSQEMVSLLKQZLLEPNPDQRFSQLSDVQNFPYMNDINWDAVFQKRLIPGF 298
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of a human serine-threonine protein kinase. The sequences can be used in the diagnosis, treatment and prevention of cancers (e.g. leukaemia, lymphoma or melanoma), CNS disorders (e.g. Parkinson's disease, stroke, or traumatic brain injury), diabetes, eating disorders (e.g. obesity, anorexia, or cachexia), allergies, anaphylaxis, asthma, inflammation and chronic obstructive pulmonary disease (COPD). The present sequence is a human serine-threonine protein kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human serine-threonine protein kinase and encoding polynucleotides, useful for diagnosing, treating and preventing central nervous system disorders (e.g. stroke), diabetes, or cancers (e.g. leukemia).

```
The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or downcomprises the sequence of any of the genes that are up-regulated in specific cancers (e.g. about 1031 genes up-regulated in capulated in specific cancers (e.g. about 1031 genes up-regulated in capulated in specific cancers (e.g. about 1031 genes up-regulated in capulated gene nucleotide sequences which encode the proteins given in ABR58521 to ABR58709. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising the vector; (4) an isolated polypeptide, which is encoded by comprising the vector; (4) an isolated polypeptide, which is encoded by comprising the vector; (5) an extibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a companient by administering to the patient the antibody above; and (7) a patient by administering to the patient the antibody above; and (7) a companient of the appropriate and (6) and (7)

This invention relates to a novel method of treating a human subject having a tumourigenic disorder or angiogenic disorder, caused by aberrant gene expression or activity of an isolated protein, by administering a modulator. The modulator may have cytostatic, antithyroid, antidiabetic or ophthalmological activity. The method is useful for treating a subject having a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example, Grave's disease and diabetic retinopathy. The present sequence is the amino acid sequence of the novel isolated human protein 3703 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ñ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

Exx:81-45-503-9216)
CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in Riken. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Retina RNA was provided by Dr. Stefano Gustincich (Department of Neurobiology, Harvard Medical School, 220 Longwood Ave., Boston, MA 02115, USA) whose assistance is gratefully acknowledged. Please visit our web site for further details.
